# Paper Workflow

A typical workflow of writing a paper:

- Start with an idea/outline
- Make a draft
- Proof
- Edit
- Repeat until done

# Workflow Shortcomings

Individual paper:

- Forget what changes were and were not made
- Make big changes but like the way it was
- Want to use the material again but alter for a different audience, journal, etc.

Group paper:

- Don't know what changes were and were not made
- Not sure what version of the paper you or others have
- Not sure who or what was added to the version in-use

# Solution

A common solution not using a version control system (VCS):

- Make a new directory and name appropriately
  - NuclearEngineeringAndDesign
  - AnnalsOfNuclearEnergy
- Make a new copy of the file and name it something different
  - AwesomePaper-Draft1.docx
  - AwesomePaper-AdvisorsNotes.docx
  - AwesomePaper-Draft2NeedCitations.docx
  - AwesomePaper-Final.docx
  - AwesomePaper-FinalAdvisorNotes.docx
  - AwesomePaper-FinalFinal.docx

# Solution Shortcomings

- Proliferation of files and directories
- No automatic list of changes; “proper” naming attempts to correct this (e.g., Draft2NeedCitations)
- Ability to go back to an earlier version would complicate naming
- Collaboration issues still not addressed

# RELAP/MELCOR Inputs:

- Build the model by slowly adding control volumes and heat structures
- Adjust geometry input as more information becomes available
- Correct issues as they're discovered
- Might break things and need to find a older, working version
- **Re-use the input for multiple different simulations or numerical experiments**

# Writing Programs

- Start simple and add more functionality
- Fix bugs as they're discovered
- Might break things and need to find a older, working version
- Someone else might want to leap off of the work already done but apply it differently

# Same Problems

- These examples, and many more, all have the problems presented by the paper example.
- The problems only become worse as the work becomes larger or more people become involved.

What's the solution?
